Appello

A mobile app that lets field-based responders provide assistance wherever it is needed.

ROLE	TOOLS	TYPE	YEAR
Product Designer	Figma	Mobile app · Android	2025

01 · OVERVIEW

One designer, the whole process

I was the only designer on the project, overseeing the entire design process, from client communication and consulting to UX/UI design, sitemaps, user flows, and brand identity. I collaborated closely with the product manager and engineer to ensure a seamless outcome.

Turning response into action

The goal was to design a mobile app that turns response into action, helping field teams assist people faster, wherever they are.

Ensure field responders stay in real-time communication with both the people in need and with each other, so everyone stays informed about active requests and ongoing assistance.

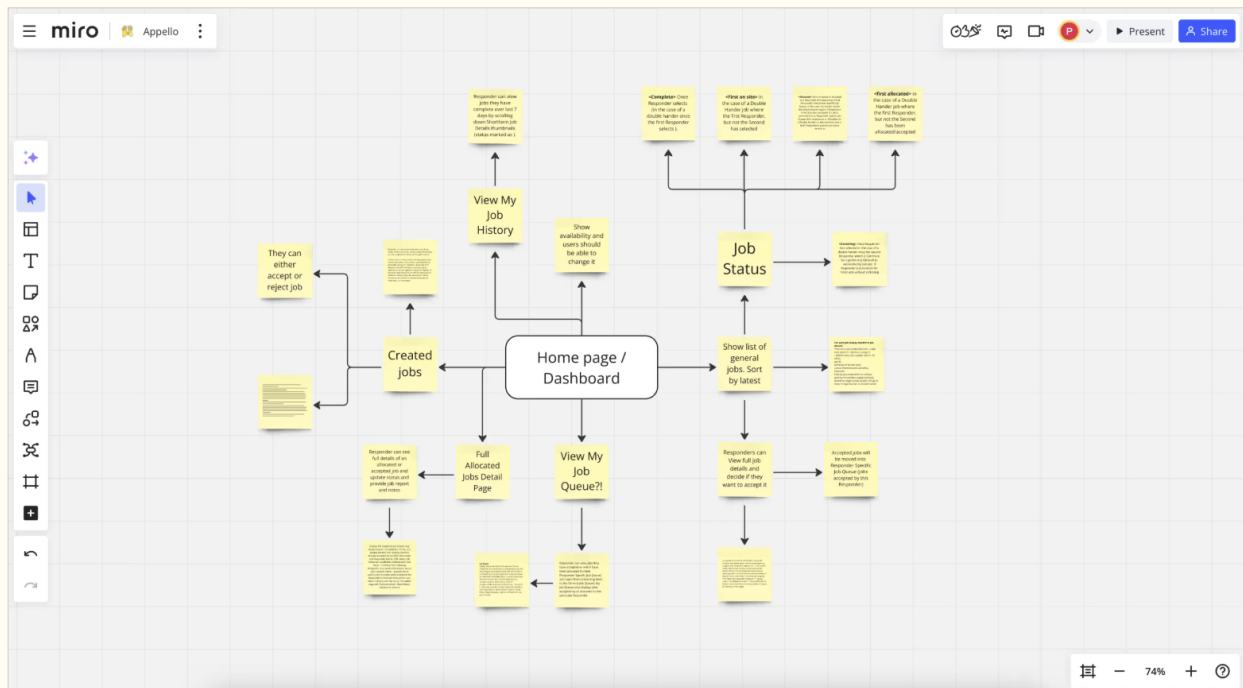

Lead the project

UI library and components

Ensure smooth UX and intuitive design

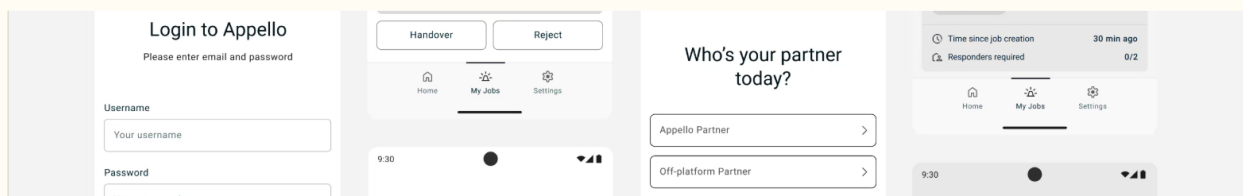

UX and page structure

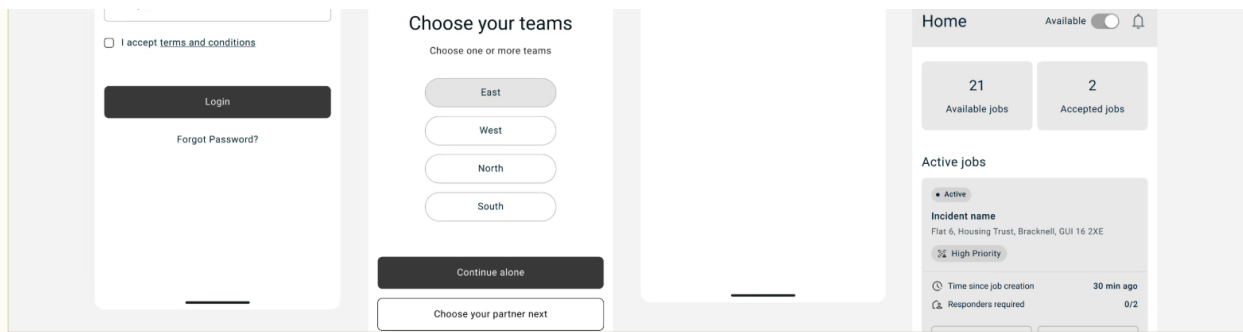

We worked closely with the client to condense a large amount of information. At this stage, our main focus was on defining requirements and shaping the information architecture.

High-fidelity wireframes

The discovery phase also involved creating wireframes and defining the main actions of the app.

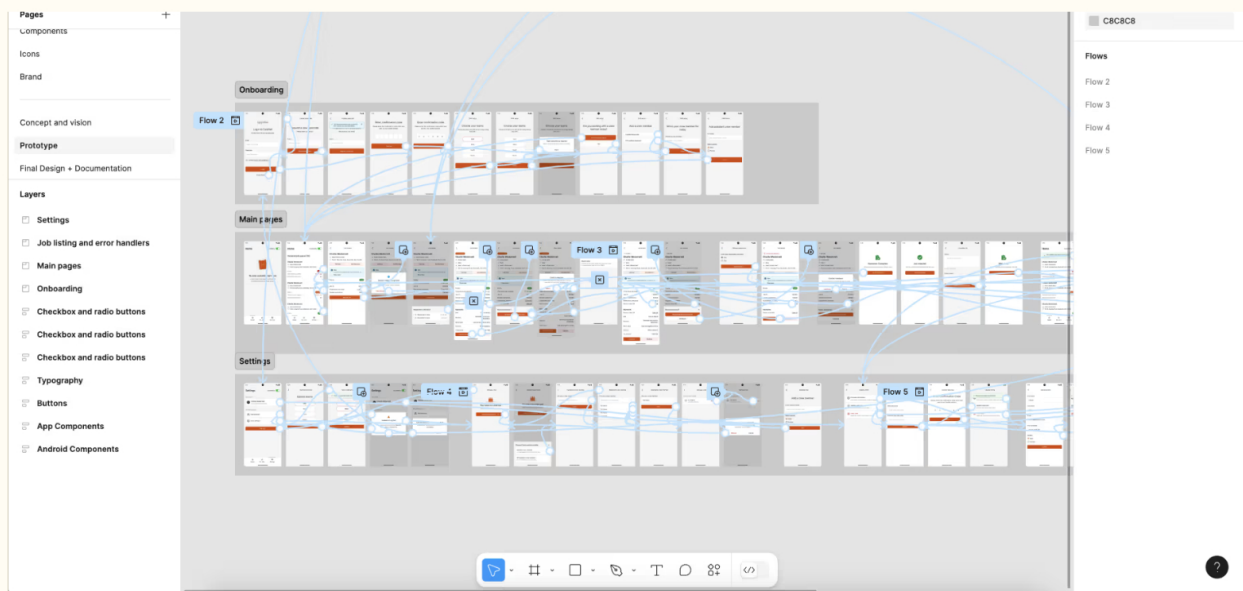

05 - PROTOTYPING

A fully-implemented prototype

We worked closely with the client and had to summarize a lot of information. I focused mostly on information architecture during this phase.

06 - PROJECT RESULTS

Delivered inside a tight window

Considering the tight timeframe, we successfully met the client's requirements and deadlines, while also addressing all necessary details.
